

Match Types

MATCH TYPES

Pattern Match

The pattern match and repeat comes from most automated presses printing wall coverings using an imprinted cylinder that repeats the design, creating both a vertical and horizontal pattern repeat. The horizontal repeat is created to match from strip to strip, and the vertical repeat allows for a design to print on the reel in endless repetition.

Straight Match

When a pattern match is straight, the design moves straight across from one wallpaper strip to the next. When hung, every strip will be the same at the ceiling line (the same part of the pattern in the first and following strips will be the same distance from the ceiling).

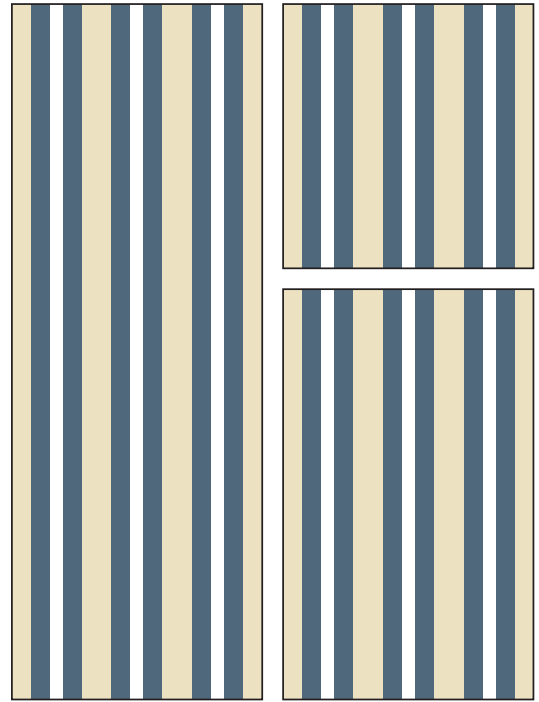

Drop Match

When a pattern match is drop, the design runs diagonally from the ceiling (it does not run in a straight line across the wall). The design is staggered so only every other strip is identical at the ceiling line.

Random Match

When a pattern match is random the wall covering does not have to be matched at the seams. No matter how you position the wall covering next to the previous strip, the pattern looks well. Typical examples of a random match are textures, grass cloths, and simple stripes.

Note: as a general rule, every other strip should be reverse hung to reduce the possibility of shading.

COMMON WALLPAPER SIZES

Residential wallpapers are available in 2 basic package sizes.

Both residential wallpaper widths are packaged with 2 single rolls in 1 double roll bolt. The bolt has a more user friendly yield than a single roll.

20 ½ inches/52,1 cm wide wallpaper is 33 feet/10 m long (11 yards) per each double roll bolt
This package size covers approximately 56 square feet/5,2 square meters

27 inches/68,6 cm wide wallpaper is 27 feet/8,2 m long (9 yards) per each double roll bolt
This package size covers approximately 60 square feet/5,57 square meters

A third package size is also fairly common due to the popularity of grass cloth.

36 inches/91,44 cm wide wallpaper is 24 feet/7,3 m long (8 yards) per double roll bolt
This package size covers approximately 72 square feet/6,67 square meters
